

2.4" height featured

Low-profile Softech® is a performance layer that eliminates the need for extra foam and expands layering options to deliver durable, responsive comfort.

- Increase coil counts by layering on top of innerspring units, adding an extra level of comfort.
- Durability and sag-resistance that outshines other comfort layer materials, like foam.
- The opportunity to customize with many applications and configuration options.
- Even support across the surface, keeping sleepers from rolling together at night and minimizing partner disturbance.

Softech® is also offered in a 1.5" height.

ComfortCore® coils feature heat-treated, stress-relieved wire that holds its shape and provides a durable, consistent sleep surface. The wire flexes and conforms to the individual contours of the body for superior comfort and reduced partner disturbance.

Innersprings sleep up to 28% cooler than foam.*

Unit Coil Counts
