

Low-Profile ComfortCore®

These 4" Low-Profile ComfortCore® coils pack a lot of benefits in a small package, including higher coil counts when layered on top of other innerspring units.

- Durability and sag-resistance that outshines other comfort layer materials, like foam.
- The opportunity to customize with many applications and configuration options.
- Even support across the surface, keeping sleepers from rolling together at night and minimizing partner disturbance.

ComfortCore® coils feature heat-treated, stress-relieved wire that holds its shape and provides a durable, consistent sleep surface. The wire flexes and conforms to the individual contours of the body for superior comfort and reduced partner disturbance.

Innersprings sleep up to 28% cooler than foam.*
