

LOW-PROFILE

Comfort Layer

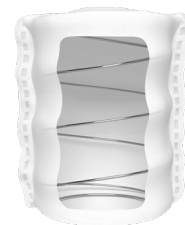

BeddingComponents.com

Low-Profile Comfort Layer is a performance layer that eliminates the need for extra foam and expands layering options to deliver durable, responsive comfort.

- **Increased Coil Counts** – Layers on top of innerspring units, adding an extra level of comfort.
- **Durability** – Long-lasting and sag-resistant to outshine other comfort layer materials.
- **Customization** – Offers many applications and configuration options.
- **Support** – Even support across the surface, keeping sleepers from rolling together at night and minimizing partner disturbance.
