

NANOCOIL® CHECKERBOARD™

Comfort Layer

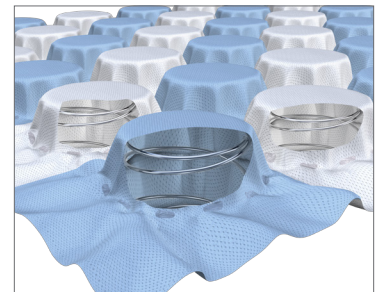

BeddingComponents.com

NanoCoil® Checkerboard™ features firm and relaxed micro-coils placed in an alternating design resembling that of a standard checkerboard. These coils are captured between sheets of fabric, providing enhanced airflow, comfort, and conformity.

- **Unique, Customized Comfort** – Alternating coil design allows the mattress to conform to the individual contours of the body for improved comfort.
- **Enhanced Air Circulation** – Creates a channel for air to flow in and out of the mattress, enabling the body to reach its desired temperature for achieving deep, restorative sleep.
- **Superior Durability** – Resists sagging, settlement, and body impressions.
- **Responsive Support** – Adjusts to body movements, thus isolating motion transfer and reducing partner disturbance.
- **Packable and Shippable** – Can be compressed, folded, and rolled.

Alternating coil design
